Quarterly Report

Mercer Multi-Manager Funds — Quarter ending 30 June 2011

"MERCER" is a registered trademark of Mercer (Australia) Pty Ltd (Mercer) ABN 32 005 315 917 which prepared this Report as a corporate authorised representative #260851 of, and on behalf of, Mercer Investment Nominees Limited (MINL) ABN 79 004 717 533, Australian Financial Services Licence #235906, the Responsible Entity of the Mercer Multi-Manager Funds (MMF). MINL is a wholly owned subsidiary of Mercer (see inside back cover).

Economy & Markets

As expected, the second quarter of 2011 saw a moderation in global growth in response to higher oil prices and the impact of the Japanese tsunami. The prospect for a modest rebound in growth over the second half of the year remains intact.

Global economy

The strong momentum of global production growth through the second half of 2010 and early 2011 slowed significantly in the June 2011 quarter. While the first three months of 2011 saw global growth gather momentum and remain resilient in the face of major political shocks and a series of major natural disasters, a moderation in growth was in fact expected by the end of the March 2011 quarter on the back of the:

- Unsustainable strength at the turn of the year.
- Steady withdrawal of monetary and fiscal support across many countries.
- Earlier sharp rises in energy and other commodity prices.
- Disruptions to global supply chains resulting from the Japanese earthquake and tsunami.

Consistent with this expectation, global share markets remained positive in April but then fell over the final two months of the financial year, against a backdrop of:

- Weaker US and European economic data.
- Inflationary concerns and further policy tightening in China.
- Renewed concerns around the sovereign debt crisis in Europe.

A rather sharp slowdown in the US has underscored the fragility of the underlying recovery, against a backdrop of renewed decline in house prices there. In Europe, despite impressive growth in Germany and other core European Union (EU) nations over the first half of this year, stresses in EU funding markets intensified.

In Europe it became increasingly clear that Greece would struggle to avoid debt rescheduling under the terms of its original rescue package, while the sustainability of public debt in Portugal and the EU's third-largest economy, Italy, also suddenly came under intense scrutiny. Contagion risks were further exacerbated by the insistence of some EU members on the private sector bearing some of the costs of any default.

The extent of the slowdown in China is somewhat less clear, but there is still no conclusive evidence that inflationary pressures are about to fall to more "manageable" levels. Moreover, the persistence of inflation in China and the developing world is raising fears that emerging markets are now a structural source of price pressures for developed economies. The uncertainty over the extent of the slowdown in China is acting to weaken investor confidence.

In contrast to the slowdown at a similar point in 2010, however, investor fears of broad-based deflation have yet to resurface. The outlook at financial year end reflected the jumps in inflation across a wide range of major developed and emerging economies over the intervening year and the US Federal Reserve's 'QE2' commitment to undertake pre-emptive action. To the extent that heightened risks of sovereign default appear largely confined to Greece, Portugal and Ireland, with a potentially small direct impact on EU banks, interbank funding strains have been much less acute than in 2010. Moreover, with temporary factors contributing to the slowdown in US growth, there has been some willingness to "look through" the softness.

Indeed, consensus forecasts assume a much better mix of global growth and inflation in the second half of 2011, and only partly reflect the expected recovery in Japanese industrial production and global supply chains.

US GDP growth is forecast to lift to around 3.0% to 3.25% (from an estimated 2.0% - 2.25% in the first half of the year), helped by recent declines in energy prices and interest rates. Inflation is forecast to begin turning lower in China and other larger emerging markets by late 2011, averting the need for substantially more restrictive policy stances. Also, EU policymakers appear to have succeeded in allaying the threat of a more damaging financial contagion by dampening fears over the sustainability of sovereign debt burdens at the periphery, at least for a time.

Financial market returns to 30 June 2011

But it is equally clear that a lot needs to go right before the potential re-emergence of a more benign market environment in the second half of the year. In the meantime, while US fiscal policy is not the same source of short-term systematic risk as the EU, the absence of a decisive resolution to the budget talks will continue to weigh heavily on investor, business and household confidence.

Whereas successful policy interventions in the US and EU built the platform for stronger growth in the second half of last year, any rebound in growth over the next six months is expected to be more modest because of the:

- Current fiscal policy vacuums in both regions.
- Ending of the second round of quantitative easing by the US Federal Reserve (i.e. QE2) and the expectation that there is unlikely to be a QE3.
- Fears that some emerging markets are still lagging in their efforts to contain inflation.

Australia

Australia's GDP contracted 1.2% in the first quarter of 2011 - the deepest quarterly decline in 20 years. This deeper-than-expected contraction, compounded by the effects of the

natural disaster in Japan in March accounted for much of the sharp downward revision to the consensus projection for GDP growth in 2011 (from a forecast 2.9% in March to 2.0% in June).

Correspondingly, forecast growth for 2012 was revised up over the same period from 3.7% to 4.0%, as much of the earlier lost production is eventually clawed back. Nevertheless, a recent string of disappointing economic data (particularly outside of the resources sector) is also evident. Inflationary pressures also gathered momentum in the June quarter.

The relatively lacklustre growth in domestic demand and real GDP is largely attributable to the household sector. It's a reflection of the hesitancy on the part of households to take on new debt and consume. On the plus side, this has led to a rise in the household savings rate to the highest levels since the mid-1980s, with household disposable income growing an impressive 8.3% over the year to first quarter of 2011. Business investment growth has also continued to accelerate (up 6.3% over the year the first quarter of 2011), although largely driven by a 21.5% surge in the mining sector (excluding investment was up by just 2.6%).

In Mercer's view, however, the risks to consensus growth forecasts are still tilted to the downside, particularly in 2012.

Markets

The 2010-11 financial year kicked off strongly and we saw global growth continue right through to April 2011, despite lingering volatility and some significant market shocks in the first quarter of 2011. Over the full 12 months to 30 June 2011, financial markets reacted positively, with equity and real assets showing strong growth.

However, performance towards the end of the financial year was weaker for these asset classes and the impact compounded for unhedged Australian-based investors by an appreciating Australian dollar.

Whilst the last two months of the financial year were negative, returns were positive across all the major asset classes for the full year to 30 June 2011 — a positive annual result for the second year in a row since the dark days of the global financial crisis. That said, and whilst the positive financial year return is reassuring, worries about the fragility of the recovery have not gone away, and this is likely to remain a concern for some months to come.

Australian Shares — Socially Responsible

The Australian sharemarket fell 4.3% in the June quarter, as declines in commodity prices led to reduced prices for materials and energy companies. Global equity markets also fell in the quarter.

A number of ongoing negative factors 'caught up' with the market during the quarter:

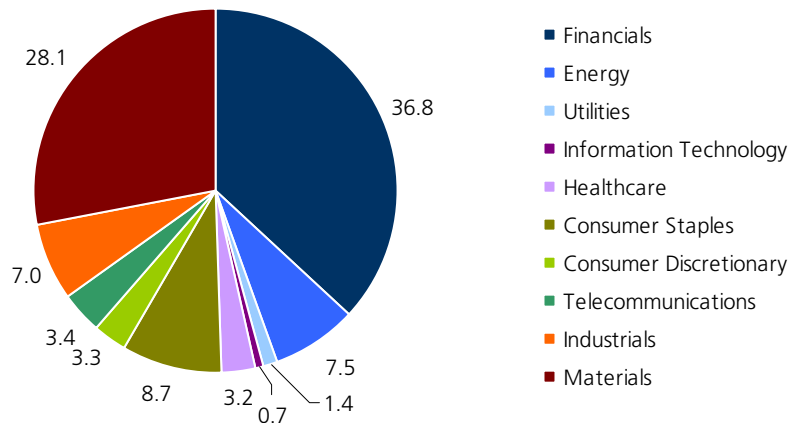

- A sharp slowing in the US economy
- Sovereign debt downgrades in Europe leading to a reduction in investor confidence
- Increasing domestic interest rates,
- A continuing strong A\$ (making it difficult for exporters)
- A downgrade of credit ratings for Australia's major banks (and financials constitute around 30% of the local market)

These latter 3 factors are the key reasons why the local market has substantially underperformed overseas equity markets over the past year. Despite the negative result in the quarter the market still recorded solid gains over the full year – up close to 12% including dividends.

Australian Shares — Socially Responsible

Mercer Socially Responsible Australian Shares Fund

Top 10 Australian share holdings

Listed (right) are the 10 largest Australian share holdings in aggregate within the Mercer Socially Responsible Australian Shares Fund at quarter end compared to their respective benchmarks.

Mercer Socially Responsible Australian Shares Fund	% of Fund	% of B'mark
BHP Billiton	8.3	12.7
Westpac Banking Corporation	7.9	5.9
National Australia Bank	7.2	4.9
Commonwealth Bank Of Australia	7.0	7.2
ANZ Banking Group	4.5	5.1
Rio Tinto	4.0	3.2
Telstra Corporation	2.6	3.3
Origin Energy	2.5	1.5
TPG Telecom	1.9	0.0
Santos	1.9	1.0

Fund performance

The fund outperformed the benchmark strongly in the quarter due to its large underweight positions in the poorer performing materials sector and an overweight position in telecommunications.

Total Returns - After fees	3 Months	1 Year	3 Years (p.a.)	5 Years (p.a.)
Mercer Socially Responsible Australian Shares Fund	-2.8	11.0	n/a	n/a

Manager performance

All Australian Shares Socially Responsible managers outperformed over the June quarter. Perpetual was the strongest performer, benefitting from an overweight to the outperforming Telecommunications sector. Positive stock selection within the underperforming Materials was the key driver of value-add for BT.

Proportion of assets managed at quarter end		Manager Returns Relative to Fund Benchmark* (+ or - %) - Before fees				
Manager		Managers	3 Months	1 Year	3 Years (p.a.)	5 Years (p.a.)

NOTE: Past performance is not a reliable indicator of future performance.

Refer to page 12 - 'Important notes about this Report' - for further information on the calculation of returns.

Overseas Shares

International sharemarkets were broadly flat over the quarter, with hedged equity returns up 0.5%.

International markets faced a number of potential negative influences in the quarter, in particular:

- The slowing US economy.
- Sovereign debt downgrades in Europe.
- Attempts by the Chinese to slow its economy.

Despite these influences markets the market as a whole proved to be quite resilient.

The resilience of international equity markets can be attributed to the fact that:

- While momentum in the US economy slowed in the June quarter expectations are that growth will be durable through 2011-12.
- European growth, led by Germany, exceeded expectations.
- Profit levels have improved.
- Market valuations remain supportive (that is, the market is not 'expensive' according to recognised valuation measures).

There was a continuing major differential between hedged and unhedged returns in international equities during the quarter due to the ongoing rise in the AUD. Over the year hedged returns were up 26.7% versus unhedged returns of 2.7%.

Mercer Hedged Overseas Shares Plus Fund	0.0	25.5	-5.1	n/a

Manager performance

Manager performance within overseas shares was mixed over the quarter, where value oriented managers Hexavest and Lingohr were the strongest contributors to performance. Hexavest benefitted throughout the quarter from its defensive positioning, being overweight the two best performing global equity sectors in Health care and Consumer Staples, while Lingohr's relative outperformance was attributable to positive stock selection. Martin Currie was the greatest detractor of relative performance as a result of some of its stock selection in the Energy and Industrials sectors.

Proportion of assets managed at quarter end				Manager Returns Relative to Fund Benchmark* (+ or - %) - Before fees				
Manager	Core Funds ²		Plus Funds	Managers	3 Months	1 Year	3 Years (p.a.)	5 Years (p.a.)

1. Not applicable to Overseas Shares Plus Funds.

2. Different manager weights applied to the two overseas shares Core Funds as a result of arrangements relating to the transition from State Street Global Advisors to Schroders.

* MSCI World Index (ex Australia) - in A\$ with net dividends reinvested, which is the benchmark used for the Funds.

SHARES

NOTE: Past performance is not a reliable indicator of future performance.

Refer to page 12 - 'Important notes about this Report' - for further information on the calculation of returns.

Emerging Markets

Emerging market (excluding the impact of the higher AUD) were modestly lower in the quarter.

While economic growth remains strong in emerging market economies there is rising concern that inflationary pressures are building and may lead to lower growth in years to come. Recent rises in interest rates in China and India are an example of attempts by emerging market countries to quell inflationary pressures.

Emerging markets vs 'large' company performance

Refer to page 32 for the top 10 benchmark weights (MSCI Emerging Markets Free Float Index) to emerging market countries as at quarter end.

Mercer Emerging Markets Fund

Fund performance

The fund outperformed the benchmark modestly in the quarter due primarily to being underweight the poorer performing energy sector.

Total & Excess Returns - Before fees (%)

Mercer Emerging Markets Fund	3 Months	1 Year	3 Years (p.a.)	5 Years (p.a.)
Total Returns - Before fees:	-3.8	-1.6	0.0	n/a

Note:

Amundi was let go as Overseas Sovereign Bonds manager during the quarter.

Important notes about this Report

Throughout this report, please note that:

- **Past performance is not a reliable indicator of future performance.**
- Only Mercer Multi-Manager Funds (MMFs) that were invested in at the end of the quarter are reported on.
- **Total returns** are based on exit prices. Total returns are shown both before and allowing for deduction of investment management fees.
- **Excess returns** relative to the benchmark are calculated by the difference between performance (before investment management fees) and the asset-weighted benchmark return.

Asset weights used are those shown in the MMFs' Product Disclosure Statement (PDS) and Investment Policy Statement (IPS) as relevant.

The benchmark used for each fund is noted in the summary of its before-fees performance. As noted, for certain funds (i.e. those invested in multiple sectors) a composite of the relevant benchmarks applies.

- **Interim Benchmark** refers to an asset allocation benchmark that currently applies only to certain funds. In this report, the Interim Benchmark is used in respect of the asset allocations for the following:
 - Mercer Shares Fund & Mercer Shares Plus Fund
 - Mercer Growth & Mercer Growth Plus
 - Mercer High Growth Fund & Mercer High Growth Plus Fund
 - Mercer Moderate Growth Fund
 - Mercer Conservative Growth Fund
 - Mercer Defensive Fund
 - (Closed) Mercer Fixed Interest Fund

The Interim Benchmark falls within the asset allocation benchmark range specified in the PDS but varies from the long-term, strategic asset allocation benchmark shown in the PDS. It is used for reporting purposes to ensure consistency between the actual asset allocation (e.g. at quarter end) and actual performance. More details on the Interim Benchmark are provided in the IPS, whilst details on the long-term, strategic asset allocation benchmark are provided in the PDS.

- **Performance attribution** refers to another way of deriving the excess return. With performance attribution, the performance above or below the benchmark return can be "attributed" to two factors:
 1. **Asset allocation:** the degree to which actual asset allocation varies from the benchmark asset allocation.
 2. **Stock/manager selection:** the degree to which returns achieved by underlying managers in the various asset classes vary from the relevant benchmark returns for those asset classes.
- Performance (before investment management fees) may be provisional depending on information available at the time of publication and may be subject to adjustment.
- As mentioned in the PDS, the diversified funds may also include "opportunistic" investments. However, no such investments were held at quarter end.
- The underlying investment manager line ups of the diversified multi-sector funds and the closed Mercer Property Fund include managers who have a 'low-risk active' (LRA) or 'passive' (P) mandate. The following table lists the relevant asset classes and managers, along with their respective returns for various periods to quarter end. These managers are only relevant to the diversified multi-sector funds (and the closed Mercer Property Fund in respect of listed property).

Manager Returns Relative to Benchmark* (+ or - %) - Before fees				
Asset Class / Manager	3 Months	1 Year	3 Years (p.a.)	5 Years (p.a.)
Emerging markets (LRA) - MSCI Emerging Markets Free Float Index				
BlackRock Investment Management	+0.3	+1.0	-1.1	n/a
Listed Property (P)				
Vanguard Investments Australia	+0.2	+2.6	n/a	n/a
Listed Infrastructure (P)				
Macquarie Investment Management	-0.5	-1.8	n/a	n/a

Please note that the managers listed above are *not* relevant to the: Mercer Emerging Markets Fund; the Mercer Listed Property Fund and the Mercer Listed Infrastructure Fund.

- Returns throughout this report may be subject to rounding error.
- As noted on the Emerging Markets page, here are the top 10 benchmark weights to emerging market countries as at quarter end:

"MERCER" is a registered trademark of Mercer (Australia) Pty Ltd (Mercer) ABN 32 005 315 917 which prepared this Report as a corporate authorised representative #260851 of, and on behalf of, Mercer Investment Nominees Limited (MINL) ABN 79 004 717 533, Australian Financial Services Licence #235906, the Responsible Entity of the Mercer Multi-Manager Funds (MMF). MINL is a wholly owned subsidiary of Mercer. Investors should be aware that the value of an investment in any MMF may rise and fall from time to time and that neither MINL nor Mercer guarantees the investment performance, earnings or return of capital invested in any MMF. If you are investing directly into any MMF, you will need to complete an application form included in, or accompanying, a current Mercer Multi-Manager Funds Product Disclosure Statement which is issued by and available from MINL. If you are investing indirectly into an MMF through an Investor Directed Portfolio Service (IDPS) or an IDPS-like service (such as a master trust, wrap account, custody or nominees service) (Service) you will need to complete the forms or documents your Service provider requires. The information contained in this Report includes general financial product advice which does not take into account the personal objectives, financial situation or needs of individual investors. It is important that you consider these matters, read the: (a) current MMF Product Disclosure Document if you are investing directly; or (b) current Product Disclosure Statement for any MMF, issued by MINL, together with the Product Disclosure Statement and/or any other offer documents applicable to your Service (available from your Service provider) if you are investing indirectly into an MMF through a Service, and obtain personal financial advice from a licensed, or appropriately, authorised financial adviser. The investment returns shown for any MMF throughout this Report do not take into account the unique characteristics that apply to each investor (such as timing of cash flow). As a result, the actual investment returns applying to a particular investor may differ from the investment returns shown in this Report. You should also remember that past performance should not be relied upon as an indicator of future performance.

Report finalised : 9 August 2011
